

HeatPhone®

Heat detection

The HeatPhone is the most effective solution for heat detection heifers, dairy cows and suckler cows.

Comfort

Easy to use, HeatPhone informs you anywhere on your mobile phone and you can view the activity curves and historical trends on any computer connected to the Internet.

Precision

Sensitivity and reliability above 95% (*), the acclaimed HeatPhone is the solution for heat detection. The SMS allows you to detect your animals in the early stages of heat allowing you to plan the best time for insemination.

Profitability

The HeatPhone you can improve the productivity of your herd by reducing the calving Index. By inseminating at the best time you optimize fertility and productive capacity of your Livestock.

(*) Qualification in spring 2010 in 27 dairy farms of the Great West with institutions Agrocampus, Amelia and Clasel.

Cycle of HeatPhone

Axel sensor mounted to the collar of the animal measured and recorded every 5 minutes, 9 statistical reports describing the activity of the animal, then transmit to the GSM radio base to over 200m. Zoo technical surveys sent to servers [DWS](#) via GSM, are archived and analyzed continuously to detect heat. Informed by SMS, you can get closer to your animals and see the signs of heat.

Composition of the kit

HeatPhone Kit consists of:

- GSM radio Base
- 10 to 200 sensors Axel
- necklaces (optional)

The use of HeatPhone requires the acquisition of a GSM radio base for the collection of data produced by sensors Axel. Operation takes place with a standard SMS subscription and a subscription to [DWS](#) .
